

DIGITAL FORENSIC INVESTIGATION REPORT

Lone Wolf Disk Image Analysis

Case Name	Lone Wolf Disk Image Analysis
Prepared By	A.Nithish D.Dhanush Sharma P.Krishna Preet K.Yash Raj
Organization	-
Tool Used	Autopsy
Acquisition	FTK Imager
Date	26th March,2026
Classification	CONFIDENTIAL — FOR ACADEMIC USE ONLY

This report presents findings from a controlled forensic examination.

Table of Contents

1. Introduction
2. Chain of Custody
3. Tools Used
4. Forensic Examination
 - Phase 3 – Initial Triage & System Profiling
 - Phase 4 – User & Account Analysis
 - Phase 5 – Network & Web Activity
 - Phase 6 – File System & Deleted Data Analysis
 - Phase 9 – Timeline Reconstruction
 - Phase 10 – Motive & Intent Analysis
5. Evidence Exhibits
6. Analysis
7. Conclusion

1. Introduction

This report presents the findings of a digital forensic investigation conducted on the disk image **LoneWolf.E01**, with the objective of identifying, analyzing, and interpreting digital evidence related to user activity on the system.

Digital forensics is a structured process that involves the preservation, acquisition, examination, and analysis of digital data in order to reconstruct events and provide evidence in a reliable and legally acceptable manner. In this investigation, a forensically sound approach was followed to ensure that the integrity of the evidence remained intact throughout the analysis process.

The disk image was examined using the Autopsy tool, which provides comprehensive capabilities for analyzing file systems, user activity, web artifacts, and system metadata. The analysis focused on identifying key artifacts such as operating system details, user accounts, browser activity, external device usage, and timeline reconstruction.

The primary goal of this investigation was to:

- Identify the system environment and user accounts present on the device
- Analyze user activity including program execution and document access
- Examine web browsing behavior and search patterns
- Detect the use of external storage devices
- Reconstruct a timeline of events to understand the sequence of actions
- Determine potential intent based on correlated evidence

The findings presented in this report are based strictly on artifacts extracted from the disk image and are supported by documented evidence, ensuring that all conclusions are objective and evidence-driven.

2. Chain of Custody

Item	Description
Evidence	LoneWolf.E01 Disk Image
Format	E01 (EnCase Image Format)
Acquisition Tool	FTK Imager
Analysis Tool	Autopsy
Integrity	Verified — Image mounted without modification

The evidence was handled in a controlled environment, and no modifications were made to the original disk image during analysis. All forensic procedures followed industry-standard protocols to maintain the integrity of the evidence.

3. Tools Used

- **Autopsy** – Primary forensic analysis tool used for disk image examination. Autopsy was used as the primary digital forensic analysis tool to examine the disk image **LoneWolf.E01**. It was utilized to extract and analyze artifacts such as operating system details, user accounts, web history, file system structure, and timeline events. The tool enabled structured investigation through its modules, allowing efficient identification of user activity, external device usage, and browser-based evidence in a forensically sound manner.
- **FTK Imager** – Disk image acquisition and hash verification. FTK Imager was used to acquire and verify the forensic disk image in **E01 format**. It ensures the integrity of digital evidence by creating exact bit-by-bit copies of storage media without altering the original data. In this investigation, it was used to mount and validate the disk image, ensuring that all subsequent analysis performed in Autopsy was conducted on a reliable and unmodified source.
- **PhotoRec (Optional)** – File recovery and carving of deleted files. PhotoRec is a file carving tool used for recovering deleted or hidden files from disk images by scanning raw data sectors. Although full recovery was not performed in this investigation, the tool and its methodology were studied to understand how deleted data can be reconstructed from unallocated space. This supports the analysis of deleted file artifacts identified during file system examination.

4. Forensic Examination

The forensic examination was conducted in multiple phases. Each phase targets a specific area of investigation, from initial system profiling to motive and intent analysis. Evidence collected in each phase was tagged and documented for inclusion as exhibits.

Phase 3 - Initial Triage & System Profiling

The system was analyzed to extract basic operating system details, file system structure, and user account information. This phase established the foundation for further investigation by identifying the primary user and system environment.

- Operating system identified: Windows 10 Education (AMD64 architecture)
- File systems detected: NTFS and FAT32 partitions
- Primary user account identified: jcloudy
- Installed programs and recent documents indicated active user interaction

The screenshot displays the Autopsy 4.22.1 interface. The left sidebar shows a tree view of the disk image structure, including partitions (vol1 to vol8), file systems (\$Extend, \$OrphanFiles, \$Deleted, \$RmMetadata, \$Unalloc, Recovery, WindowsRE), and system volume information. The main pane shows a table of partitions with columns: Name, ID, Starting Sector, Length in Sectors, Description, and Flags. Below this, the 'Operating System Information' tab is active, showing details for 'DESKTOP-PM6C56D' running 'Windows 10 Education' on 'AMD64' architecture. The 'Data Artifacts' pane on the left lists various system artifacts like Chromium Extensions, Profiles, Programs, Documents, Recycle Bin, Run Programs, Shell Bags, USB Device Attached, Web Bookmarks, Cookies, Downloads, History, and Search results.

Name	ID	Starting Sector	Length in Sectors	Description	Flags
vol1 (Unallocated: 0-2047)	1	0	2048	Unallocated	Unallocated
vol4 (Basic data partition: 2048-1023999)	4	2048	1021952	Basic data partition	Allocated
vol5 (EFI system partition: 1024000-1226751)	5	1024000	202752	EFI system partition	Allocated
vol6 (Microsoft reserved partition: 1226752-1259519)	6	1226752	32768	Microsoft reserved partition	Allocated
vol7 (Basic data partition: 1259520-1000214527)	7	1259520	998955008	Basic data partition	Allocated
vol8 (Unallocated: 1000214528-1000215215)	8	1000214528	688	Unallocated	Unallocated

OS Information:

The forensic examination identified that the analyzed disk image was running **Windows 10 Education** operating system on the host system **DESKTOP-PM6C56D**. This information was extracted using Autopsy from the system registry artifacts.

Name	ID	Starting Sector	Length in Sectors
vol1 (Unallocated: 0-2047)	1	0	2048
vol4 (Basic data partition: 2048-1023999)	4	2048	1021952

Installed Programs:

The forensic analysis of installed applications revealed multiple software programs present on the system. These installed programs provide insight into the system's usage and help identify potential tools or applications used by the primary user.

Phase 3 — System Profiling — Analysis Note

In this phase, the disk image **LoneWolf.E01** was examined using the **Autopsy digital forensic analysis tool** in order to identify basic system information and user activity artifacts.

The objective of this phase was to determine the operating system details, file system structure, user accounts, installed software, and recently accessed documents present within the system.

The forensic analysis identified that the system was running **Windows 10 Education** operating system on the host machine **DESKTOP-PM6C56D**. This information was extracted from operating system artifacts stored within the system registry.

Further analysis of the disk image revealed that the system partitions utilized **NTFS and FAT32 file systems**, which are commonly used by Windows operating systems for storing system files and boot configurations.

User account analysis revealed several system accounts created by Windows; however, the primary user account identified on the system was "**jcloudy**." The account showed multiple login activities and had its home directory located at **C:\Users\jcloudy**, indicating that this account was actively used to access and operate the system.

The examination of **installed programs artifacts** revealed various software applications installed on the system. These applications provide insight into the functionality of the computer and help investigators determine the possible tools used by the system user.

Additionally, the **recent documents artifacts** provided evidence of files that were accessed by the user in recent sessions. These artifacts help investigators reconstruct user behavior and identify documents that may be relevant to the investigation.

Overall, Phase 3 successfully established the **system environment, user account information, and initial user activity indicators**, which form the foundation for deeper forensic investigation in the subsequent phases.

Phase 4 - User & Account Analysis

User-related artifacts were examined to understand user behavior and account activity. The analysis of browser profiles and USB device records provided key insights into user identity and data transfer activities.

- Primary user account: jcloudy
- Account activity logs indicated multiple login instances
- Chromium profile: Username jimcloudy1@gmail.com, Browser: Google Chrome
- USB Device: SanDisk SDCZ80 Flash Drive — Device ID: AA010251705353510594

The presence of an external USB storage device indicates possible data transfer activity, which warrants further investigation into file access and movement.

Artifact ID	-9223372036854775629	

USB Device Activity:

USB device artifacts revealed removable storage devices that were connected to the system. These artifacts help investigators determine whether external storage devices were used to transfer or store files.

Field	Value
Device Make	SanDisk Corp.
Device Model	SDCZ80 Flash Drive
Device ID	AA010215170355310594
Date/Time	2018-03-27 17:43:16 IST
Source	SYSTEM

Source Name	S	C	O	Path	User ID	Domain	Short Cut	Name	Username	Program Name	Data Source
Local State				Default	111256729592432613619			Person 1	jimcloudy1@gmail.com	Google Chrome	LoneWolf.E01

S3Browser, and Microsoft Word, indicating that the user performed web browsing, cloud storage synchronization, and document editing activities.

Further examination of the **Recycle Bin artifact** identified files that had been deleted by the system user. Among the deleted artifacts was an HTML file containing firearm-related news content, suggesting that the user had accessed or stored such content prior to deletion.

Analysis of **Shellbag artifacts** revealed directories that were accessed by the system user. Shellbags record folder navigation activity within Windows Explorer and allow investigators to identify folders accessed by the user even if the directories were later deleted from the system.

The investigation also identified evidence of external storage device usage. USB device artifacts revealed that a **SanDisk Corp. SDCZ80 Flash Drive** with **Device ID AA010215170355310594** was connected to the system on **27 March 2018 at 17:43:16 IST**, indicating that removable storage may have been used to transfer or store files.

Finally, analysis of **Chromium browser profiles** revealed that the system user utilized **Google Chrome** with a profile linked to the email account **jimcloudy1@gmail.com**. The profile identified as **“Person 1”** had the associated **User ID 111256729592432613619**, confirming that the browser activity was linked to the system user account.

Overall, Phase 4 successfully identified user-level activity artifacts including executed programs, deleted files, folder access history, external device usage, and browser profile information. These findings provide important insight into the behavior and system usage patterns of the primary user associated with the disk image.

Phase 5 - Web Activity Analysis

Web history and browser artifacts were analyzed to identify user browsing behavior. The analysis revealed a focused pattern of web searches and site visits related to firearms and weapons.

- Multiple web searches related to firearms and weapons were identified
- User accessed: gunbroker.com
- User accessed: keltecweapons.com
- User accessed: cheaperthandirt.com
- Total of 24 suspicious web entries related to weapon searches identified and tagged.

This pattern indicates focused and repeated interest in weapon-related content, going beyond casual browsing behavior.

Web History:

The web history analysis revealed that the user accessed multiple websites related to firearms and weapon acquisition. Notable entries include visits to gunbroker.com for firearm listings such as **FN P90 and 9mm ammunition**, along with Google search URLs indicating queries related to firearm acquisition and usage.

Web Searches:

Examination of web history records identified Google search queries embedded within URLs, including searches such as “**shooting range near me**” and “**how easy is it to buy an illegal gun**”, indicating intentional research related to firearms and weapon access.

Weapon Marketplace:

The browsing history contained multiple visits to **gunbroker.com**, **novafirearms.com**, a known online firearm marketplace. The user accessed pages related to **FN P90 weapons and 9mm ammunition**, indicating active exploration of firearm purchase options.

Phase 5 — Web Activity Analysis

Phase 5 focused on the analysis of browser-related artifacts extracted from the disk image **LoneWolf.E01** using the Autopsy forensic tool. The objective of this phase was to identify web activity, search behavior, and online interactions performed by the system user.

The analysis of **Web History artifacts** revealed extensive browsing activity, including over **2400 recorded entries**. Among these, several entries were identified

as relevant to the investigation, particularly those associated with firearm-related research and online weapon marketplaces.

The user was found to have accessed **gunbroker.com**, a known online firearm marketplace, with multiple visits to pages related to **FN P90 weapons and 9mm ammunition**, indicating active interest in firearm acquisition.

Further analysis of embedded Google search URLs revealed queries such as **“shooting range near me”** and **“how easy is it to buy an illegal gun”**, demonstrating intentional research into firearm usage and accessibility.

Overall, Phase 5 provided critical insight into the **online behavior and research patterns of the system user**, highlighting a clear pattern of firearm-related searches, website visits, and online activity that may be relevant to the investigation.

Phase 6 - File System & Deleted Data Analysis

File system analysis was conducted to identify stored and deleted artifacts. Directory structures and file metadata were examined to understand system organization and user file activity.

- Structured directories identified under user profile paths
- Document files and system files identified under user directories
- No major critical deleted evidence was recovered in this phase
- File metadata and directory structures analyzed for further insights

Phase 7,8:

Phase 7 involved the examination of browser-related and cloud-based activity artifacts. Analysis of Chromium profiles, web history, and web-based account access confirmed the use of the email account **jimcloudy1@gmail.com** and interaction with cloud platforms such as Google services, Box, and Dropbox. While no direct cloud-stored files were accessed during the investigation, the presence of these artifacts indicates that the user actively utilized browser and cloud services for online activity.

Phase 8 focused on identifying relevant evidence through keyword-based filtering and correlation of artifacts. Specific keywords related to firearms and weapon activity were applied to web history records, resulting in the identification of **24 suspicious entries**. These entries were tagged and analyzed to establish a connection between user searches, website visits, and overall behavior patterns. This process enabled effective narrowing down of relevant evidence from large datasets.

Phase 9 Timeline Reconstruction

Timeline analysis was performed using Autopsy to reconstruct the chronological sequence of user activity. The timeline provides a clear view of the progression of user behavior over the investigation period.

- Activity observed between March 27, 2018 – April 6, 2018
- Cloud storage research activity detected early in the timeline
- Firearm-related browsing activity identified in the middle period
- Document creation: Cloudy Manifesto.docx — recorded in final period

The timeline revealed a clear progression of user behavior from general browsing to targeted research, culminating in the creation of documents during the same period as firearm-related activity.

The screenshot displays the Autopsy Timeline Editor interface. The main window shows a list of events with columns for Date/Time, Event Type, Description, Tagged, and Hash Hit. The events are sorted chronologically, starting from 2018-03-27 14:50:00. The event type 'Document Created' is highlighted, and the description shows the document was created by 'jcloudy'.

Source File Path	/img_LoneWolf501/vol_v017/Users/jcloudy/Desktop/The Cloudy Manifesto.docx	org.sleuthkit.autopsy.keywordsearch.KeywordSear
Artifact ID	-9223372036854758283	

Document Activity:

Timeline analysis identified document-related activity under the user account jcloudy, where a Microsoft Word document titled *"The Cloudy Manifesto.docx"* was created on 02 April 2018 at 01:00:00 IST and later modified at 01:35:00 IST. This indicates active document creation and editing behavior by the user.

The screenshot displays the Timeline-Editor application. The left sidebar contains filters for 'Must include text', 'Must be tagged', 'Must have hash hit', 'Limit data sources to' (with 'LoneWolf E01 (ID: 1)' selected), 'Limit event types to' (with 'File System', 'Web Activity', and 'Web Downloads' selected), and 'Hidden Descriptions'. The main panel shows a table of events with columns for Date/Time, Event Type, Description, Tagged, and Hash Hit. The events are sorted by time, showing a sequence of web searches and history accesses related to cloud storage services like Amazon Cloud Drive, Google Drive, and various search engines. The bottom of the interface shows a timeline view with a start date of 27-Mar-2018, 2:50:00 pm and an end date of 06-Apr-2018, 6:25:14 pm.

Cloud Storage Research Activity:

The timeline revealed multiple web searches and visits related to cloud storage services on 28 March 2018, including access to websites such as pcmag.com, techradar.com, and cloudwards.net, along with search queries related to cloud storage providers. This indicates that the user was actively researching cloud storage platforms.

Advanced Weapon Research Activity:

Further timeline analysis on **31 March 2018** revealed detailed and repeated searches related to firearms, including queries such as “**submachine guns**”, “**Kel-Tec**”, and visits to websites such as **keltecweapons.com** and **cheaperthandirt.com**. Multiple accesses to **gunbroker.com** item listings were also identified, indicating deeper exploration of firearm options.

Phase 9 — Timeline Reconstruction

Phase 9 involved reconstructing a chronological sequence of user activity using the Timeline analysis feature in Autopsy. The analysis was conducted in list view to observe events in a structured and time-ordered manner.

The timeline revealed that the user **jcloudy** was actively engaged in system and web-based activities between **March 2018 and April 2018**. The reconstruction identified a clear progression of behavior over time.

Initial activity on **28 March 2018** showed multiple web searches and visits related to cloud storage services, indicating that the user was exploring options for online data storage. This included visits to websites such as **pcmag.com**, **techradar.com**, and **cloudwards.net**, along with search queries related to cloud platforms.

Following this, the timeline revealed the initiation of firearm-related browsing activity on the same date, including access to **gunbroker.com**, suggesting a shift in user focus toward weapon-related content.

Further analysis of events on **31 March 2018** demonstrated more advanced and specific firearm-related searches. The user conducted searches for terms such as “**submachine guns**” and accessed specialized weapon-related websites including **keltecweapons.com** and **cheaperthandirt.com**, along with repeated visits to firearm listing pages on **gunbroker.com**.

Additionally, document activity was identified on **02 April 2018**, where a file titled “*The Cloudy Manifesto.docx*” was created and modified under the user account **jcloudy**, indicating active content creation during the same period.

The timeline reconstruction highlights a progression of user behavior from general research (cloud storage) to more focused and detailed exploration of firearm-related content, along with concurrent document activity. This sequence establishes a coherent pattern of actions performed by the user over time.

Phase 10 Motive & Intent Analysis

Based on correlation of all evidence gathered in previous phases, motive and intent analysis was performed to assess the nature and purpose of the observed user activities.

- User performed repeated firearm-related searches across multiple sessions
- Accessed multiple weapon-related commercial platforms
- Conducted cloud storage research within the same timeframe
- Created documents (Cloudy Manifesto.docx) during the same period of activity

This indicates structured and intentional activity, suggesting preparation behavior rather than casual or incidental usage.

(Extracted) Cloudy Manifesto.docx Preview :

The Cloudy Manifesto

What happens when the government can no longer protect you. What happens when you need protection from the government? What happens when you can no longer protect yourself?

You are responsible for your own safety and protection. You may choose to provide that safety by handing the responsibility over to elected officials and paid public workers. This has worked well for many years, and I have nothing against this system. However, with the increased scrutiny of law enforcement officials comes a shortage in those jobs. Now, your decision to sub-contract your safety may have a negative impact. Response times may increase. Investigations may not get solved. So, again, whose job is it to protect you?

It's yours. If you choose not to protect yourself, that is YOUR choice. Your choice to be a sheep should not affect other's abilities to protect themselves. Look at Clive Bundy and the now the Snake River Ranchers. Without the means to protect themselves, they would have been victims of the government. Without the means to protect yourself, you may be a victim of the same, or of your fellow man.

Feinstein Logic!

"When the gunman realizes that nobody else is armed, he will lay down his weapons and turn himself in.... that's just human nature."

The Cloudy Manifesto

This is why. They know they can't take us in a fight. Our military is full of people who grew up around guns and are comfortable shooting them. Get rid of that and it erodes a portion of our readiness. Perhaps that gives them enough edge against our young men to win, or to arrive on our shores. Well right now, as you can see from the quote above, they wouldn't consider it. Our insurgency would put those in the middle east to shame. We would organize and hit them hard. After traveling so far they would be spread thin and be easy pickings for our gun-toting Patriots! But, disarm the populace and no matter how tired they are when they arrive, they will have plenty of time to rest up while we hurl rocks and canned goods at them. Or while we hide in our houses and do as they say to avoid annihilation.

The Cloudy Manifesto

protect yourself will work. The Second Amendment was not "poorly written" it was drafted by the same men who drafted the rest of the Constitution. And no one is complaining about the protections and freedom it gives you. Especially the 1st amendment which allows you to spew your crazy gun-control thoughts.

You will soon see when the blood has been shed and the defenseless bodies stacked high. I will do what I must. No matter who is hurt, the collateral damage will be worth it.

I will be the change. I will be the revolutionary. I will be the history maker. I will fight. I will be the Lone Wolf.

I'm your Huckleberry. Just how is it you plan to kill me and take it when you protested the police out of business and you are afraid of guns?

This will never stop. Once they outlaw guns, criminals will turn to knives. Then they will try to outlaw those as well. This is happening in the UK now. They already outlawed guns, and now they want to outlaw pocket knives. Now they are going after free speech by convicting a comedian of making a joke when his dog raised his paw to a TV show featuring footage of Hitler. He wasn't saying Hitler was good. He was saying wow, look at my evil dog. But the context didn't matter.

So stop saying it worked for the UK. Well if we agreed with everything they did, we wouldn't exist right now, we'd still be a part of them.

Planning.docx:

Planning

1. Target
 - a. Must have good escape route
 - b. Preferably near Airport
 - c. Must be Gun Free zone.
2. Supplies
 - a. Gun (black market)
 - i. Norther VA Gun Works 7518 Fullerton Rd # K, Springfield, VA 22153
 - ii. NOVA 412 W Broad Street Falls Church, VA 22046
 - iii.
 - b. Ammo.
 - i. 9mm is 1000 for \$360
 - ii. Kel-Tec Sub 2000 9mm \$400.
 - c. Latex gloves
 - d. Velcro tear away clothing?
 - e. Cash
3. Escape
 - a. No Extradition countries
 - i. Indonesia (Nicer, but more expensive)
 - ii. Vietnam
 - iii. Can live very well on 100 a day, for 9 years.
 - b. Buy tickets for same day
 - c. Preferable direct flight
 - d. Have suitcase in car.
4. Release
 - a. Start writing ideas and thoughts
 - b. Save to separate locations for redundancy
 - c. Place it in the cloud for remote access
 - d. "Press Release" once home free.

Airport Information.docx:

AIRPORT INFORMATION

Ronald Reagan has best record of on-time departures.

Dulles has flights to Indonesia. With Layover in Qatar.

22 min from Fairfax County Democratic Committee, 8500 Executive Park Ave, Fairfax, VA 22031 to Dulles Airport.

The screenshot shows the American Airlines website interface. At the top, there's a navigation bar with links for Plan Travel, Travel Information, and AAdvantage. Below this, the 'Passengers' section is active, displaying a search for a round trip from Washington, DC to Denpasar Bali, Indonesia, for Saturday, April 7, 2018 to Saturday, April 21, 2018. The trip total is \$1,742.01. A sidebar on the right promotes the AAdvantage credit card, offering a \$200 statement credit. The bottom of the page features a 'Passenger details' section with a link to the TSA privacy notice. The Windows taskbar at the bottom shows the time as 2:37 AM on 4/3/2018.

Phase 10 — Motive & Intent Analysis

Phase 10 focused on interpreting the collected forensic evidence to determine the possible motive and intent behind the user's actions.

The investigation identified that the primary system user **jcloudy** actively used the system to perform a series of related activities, including web browsing, document creation, and interaction with external platforms.

Timeline and browser analysis revealed a clear pattern of behavior where the user initially conducted research on **cloud storage services**, potentially indicating an intention to store or manage data externally. This was followed by a transition into firearm-related searches and website visits.

The user accessed multiple firearm-related platforms such as **gunbroker.com**, **keltecweapons.com**, and **cheaperthandirt.com**, and performed specific search queries related to **submachine guns** and firearm models. The repeated and detailed nature of these searches indicates deliberate and focused research behavior rather than incidental browsing.

Additionally, the creation of a document titled "The Cloudy Manifesto.docx" suggests that the user may have been documenting thoughts, plans, or related information during this period of activity.

The combination of:

- targeted firearm-related searches
- repeated access to weapon-related websites
- cloud storage research
- and document creation

indicates a pattern of **structured and intentional activity**.

Based on the correlation of these findings, it can be inferred that the user demonstrated **preparatory behavior**, involving information gathering, potential data organization, and access to external platforms.

While no direct evidence of execution of harmful actions was identified, the overall activity pattern suggests a level of intent consistent with **planning or preparation**, rather than casual usage.

6. Analysis

The investigation revealed a clear pattern of user behavior demonstrating a structured and intentional sequence of activities. The following progression was identified:

1. Initial exploration of cloud storage platforms
2. Transition into firearm-related searches across multiple platforms
3. Repeated visits to weapon-related commercial websites
4. Creation of documents (Cloudy Manifesto.docx) during the same period

This progression indicates a deliberate shift from general activity to focused and intentional actions. The correlation between web activity, USB device usage, and document creation within a defined timeframe suggests coordinated behavior rather than coincidental activity.

The identification of a specific user account (jcloudy), linked email profile (jimcloudy1@gmail.com), and external storage device provides a strong chain of attribution for the observed activities.

7. Conclusion

The forensic analysis of the disk image LoneWolf.E01 identified significant user activity associated with the account jcloudy. The evidence demonstrates that the user engaged in the following documented activities:

- Repeated firearm-related searches across multiple commercial platforms
- Access to weapon-related websites (gunbroker.com, keltecweapons.com, cheaperthandirt.com)
- Interaction with external USB storage devices (SanDisk SDCZ80)
- Document creation activities within the same investigation timeframe

Based on the correlation of these findings, the activity pattern suggests intentional and structured behavior, potentially indicating preparatory actions. The timeline analysis further reinforces this conclusion by demonstrating a clear progression from general to targeted activity.

No direct evidence of execution of harmful activity was identified; however, the observed behavior is consistent with planning and research activity. All findings are based strictly on digital evidence extracted from the disk image, without inference beyond what the data supports.
